PROFESSIONAL SUMMARY

Backend engineer with 6 years of experience building high-throughput APIs and distributed data pipelines. Focused on Node.js, PostgreSQL, and cloud infrastructure, with a track record of shipping reliable systems under real production load.

EXPERIENCE

Senior Backend Engineer — Northwind Logistics (2022 - Present)

- Redesigned the order-routing service, cutting p99 latency from 800ms to 120ms
- Migrated a monolithic Rails billing module to a Node.js/TypeScript microservice
- Introduced structured logging and tracing, reducing mean incident time-to-diagnosis by 40%
- Mentored two junior engineers through their first on-call rotations

Backend Engineer — Fenwick Analytics (2019 - 2022)

- Built a real-time event-ingestion pipeline processing 50M events/day with Kafka
- Designed and maintained a PostgreSQL schema serving both OLTP and reporting workloads
- Implemented CI/CD pipelines with GitHub Actions, cutting deploy time from 45 to 6 minutes

EDUCATION

B.S. in Computer Science — University of Texas at Austin, 2019

SKILLS

Frameworks: Node.js, Express, NestJS, React

Tools: PostgreSQL, Kafka, Docker, Kubernetes, AWS, Terraform

Soft Skills: Mentorship, Incident Response, Technical Writing

CERTIFICATIONS

AWS Certified Solutions Architect — Associate, 2021

PROJECTS

Queue Insights — Open-source Kafka consumer-lag dashboard (github.com/jordanellis/queue-insights)
Built with Node.js and React; used by several small engineering teams to monitor consumer lag.
